Alexis:

We will be discussing data management and interpretation today. I will send you the latest process directive from OSWER shortly.

No doubt there are pulses from many factors in pre-event, during the event, and post-event conditions. I'm sure the release from Navajo Dam during the event is affecting data in the San Juan.

Subject: HIGH PRIORITY--River System Characteristics

Bob, thanks for the conversation just now about apparent spikes or pulses in certain parameters showing in the water quality data on the San Juan and Animas Rivers. It makes sense that the rain events and stormwater flows would be a factor. As we discussed, you'll get your experts on this asap so we can help the data teams answer this question and we can factor it into our analysis.

The EPA Area Commander and his Deputy are copied on this email, so please "reply all" so the USGS information gets to Area Command and quickly as possible.
